Abstract

Virtual screening, or in **silico** screening, is a new approach attracting increasing levels of interest in the pharmaceutical industry as a productive and cost-effective technology in the search for novel lead compounds. Although the principles involved-the computational analysis of chemical databases to identify compounds appropriate for a given biological receptor-have been pursued for several years in **molecular modeling** groups, the availability of inexpensive high-performance computing platforms has transformed the process so that increasingly complex and more accurate analyses can be performed on very large data sets. The virtual screening technology of Protherics **Molecular** Design

Ltd. is based on its integrated software environment for receptor-based drug design, called Prometheus. In particular, **molecular** docking is used to predict the binding modes and binding affinities of every compound in the data set to a given biological receptor. This method represents a very detailed and relevant basis for prioritizing compounds for biological screening. This paper discusses the broader scope of virtual screening and, as an example, describes our recent work in docking one million compounds into the estrogen hormone receptor in order to highlight the technical feasibility of performing very large-scale virtual screening as a route to identifying novel drug leads. (31 refs).

1 [Analysis and Performance Results of a Molecular Modeling Application on Merrimac](#)

Mattan Erez, Jung Ho Ahn, Ankit Garg, William J. Dally, Eric Darve

 November 2004 **Proceedings of the 2004 ACM/IEEE conference on Supercomputing**

 Full text available: [pdf\(8.74 MB\)](#)

 Additional Information: [full citation](#), [abstract](#)

The Merrimac supercomputer uses stream processors and a high-radix network to achieve high performance at low cost and low power. The stream architecture matches the capabilities of modern semiconductor technology with compute-intensive parallel applications. We present a detailed case study of porting the GROMACS molecular-dynamics force calculation to Merrimac. The characteristics of the architecture which stress locality, parallelism, and decoupling of memory operations and computation, allow ...

2 [Data engineering for life sciences: A distributed database for bio-molecular images](#)

Ambuj K. Singh, B. S. Manjunath, Robert F. Murphy

 June 2004 **ACM SIGMOD Record**, Volume 33 Issue 2

 Full text available: [pdf\(12.37 MB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#)

Information technology research has played a significant role in the genomics revolution over the past decade, from aiding with large-scale sequence assembly to automating gene identification to efficiently searching databases by sequence similarity. The tremendous amount of information gathered from genomics will be dwarfed in the next decade by the knowledge to be gained from comprehensive, systematic studies of the properties and behaviors of all proteins and other biomolecules. High-resoluti ...

3 [Applications of visualization: DNA in Virtuo visualization and exploration of 3D genomic structures](#)

J. Hérisson, P. E. Gros, N. Férey, O. Magneau, R. Gherbi

 November 2004 **Proceedings of the 3rd international conference on Computer graphics, virtual reality, visualisation and interaction in Africa**

 Full text available: [pdf\(293.48 KB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#)

In this paper, we address the potential offered by Virtual Reality and scientific simulation for 3D modeling and immersive visualization of huge genomic sequences. Advanced work on 3D data modeling and structuring is proposed. In Bioinformatics, DNA sequences are often represented within linear format. However, they also have a three-dimensional structure potentially suitable for genomic analysis. The representation of such 3D structure allows biologists to observe and analyze genomes in an i ...

Keywords: 3D modeling, bioinformatics, human-computer interaction, scientific visualization, virtual reality

4 Visualization: PathSim visualizer: an Information-Rich Virtual Environment framework for systems biology

Nicholas F. Polys, Doug A. Bowman, Chris North, Reinhard Laubenbacher, Karen Duca
April 2004 **Proceedings of the ninth international conference on 3D Web technology**

Full text available:  pdf(423.88 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Increasingly, biology researchers and medical practitioners are using computational tools to model and analyze dynamic systems across scales from the macro to the cellular to the biochemical level. We are using Information-Rich Virtual Environments (IRVEs) to display the results of biological simulations, and to allow users to interact with those simulations. While simulation architectures, algorithms, and processing power have enjoyed continuous optimization to date, the user interfaces to these ...

Keywords: bioinformatics, information visualization, virtual environments

5 Bioinformatics: A hypothesis driven approach to condition specific transcription factor binding site characterization in S.c.

Rhonda Harrison, Charles DeLisi
March 2002 **Proceedings of the 2002 ACM symposium on Applied computing**

Full text available:  pdf(670.68 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We demonstrate a computational process by which transcription factor binding sites can be elucidated using genome-wide expression and binding profiles. The profiles direct us to the intergenic locations likely to contain the promoter regions for a given factor. These sequences are multiply and locally aligned to give an anchor motif from which further characterization can take place. We present bases for and assumptions about the variability within these motifs which give rise to potentially more ...

6 Protein Explorer: A Petaflops Special-Purpose Computer System for Molecular Dynamics Simulations

Makoto Taiji, Tetsu Narumi, Yousuke Ohno, Noriyuki Futatsugi, Atsushi Suenaga, Naoki Takada, Akihiko Konagaya
November 2003 **Proceedings of the 2003 ACM/IEEE conference on Supercomputing**

Full text available:  pdf(194.71 KB) Additional Information: [full citation](#), [abstract](#)

We are developing the 'Protein Explorer' system, a petaflops special-purpose computer system for molecular dynamics simulations. The Protein Explorer is a PC cluster equipped with special-purpose engines that calculate nonbonded interactions between atoms, which is the most time-consuming part of the simulations. A dedicated LSI 'MDGRAPE-3 chip' performs these force calculations at a speed of 165 gigaflops or higher. The system will have 6,144 MDGRAPE-3 chips to achieve a nominal peak performance ...

7 Let the shoemaker make the shoes - an abstraction layer is needed between bioinformatic analysis, tools, data, and equipment: an agenda for the next 5 years

Tariq Segal, Ross Barnard
January 2003 **Proceedings of the First Asia-Pacific bioinformatics conference on Bioinformatics 2003 - Volume 19 CRPITS '03**

Full text available:  pdf(347.49 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Bioinformatic tool development is being driven by individual efforts which while extending

the boundaries of what is possible, are constrained by the framework in which the tools are being defined. This is resulting in a slower development process, as well as tools that operate independently of other tools, and suffer inconsistent interfaces in terminology, layout, level of standards compatibility, stability, etc. The utility of these tools could be increased with better planning and development ...

Keywords: abstraction layer, bioinformatics, framework, tools

8 Computational models: BLOB computing

Frédéric Gruau, Yves Lhuillier, Philippe Reitz, Olivier Temam

April 2004 **Proceedings of the 1st conference on Computing frontiers**

Full text available:  [pdf\(1.02 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Current processor and multiprocessor architectures are almost all based on the Von Neumann paradigm. Based on this paradigm, one can build a general-purpose computer using very few transistors, e.g., 2250 transistors in the first Intel 4004 microprocessor. In other terms, the notion that on-chip space is a scarce resource is at the root of this paradigm which trades on-chip space for program execution time. Today, technology considerably relaxed this space constraint. Still, few research works q ...

Keywords: bio-inspiration, cellular automata, scalable architectures

9 Special section on semantic web and data management: The Grid: an application of the semantic web

Carole Goble, David De Roure

December 2002 **ACM SIGMOD Record**, Volume 31 Issue 4

Full text available:  [pdf\(600.40 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#)

The Grid is an emerging platform to support on-demand "virtual organisations" for coordinated resource sharing and problem solving on a global scale. The application thrust is large-scale scientific endeavour, and the scale and complexity of scientific data presents challenges for databases. The Grid is beginning to exploit technologies developed for Web Services and to realise its potential it also stands to benefit from Semantic Web technologies; conversely, the Grid and its scientific users p ...

10 A search engine for 3D models

Thomas Funkhouser, Patrick Min, Michael Kazhdan, Joyce Chen, Alex Halderman, David Dobkin, David Jacobs

January 2003 **ACM Transactions on Graphics (TOG)**, Volume 22 Issue 1

Full text available:  [pdf\(7.91 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

As the number of 3D models available on the Web grows, there is an increasing need for a search engine to help people find them. Unfortunately, traditional text-based search techniques are not always effective for 3D data. In this article, we investigate new shape-based search methods. The key challenges are to develop query methods simple enough for novice users and matching algorithms robust enough to work for arbitrary polygonal models. We present a Web-based search engine system that support ...

Keywords: Search engine, shape matching, shape representation, shape retrieval

11 A perturbation scheme for spherical arrangements with application to molecular modeling

Dan Halperin, Christian R. Shelton

August 1997 **Proceedings of the thirteenth annual symposium on Computational geometry**

Full text available:  [pdf\(1.31 MB\)](#)

Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

12 A display system for the Stellar graphics supercomputer model GS1000

Brian Apgar, Bret Bersack, Abraham Mammen

June 1988 **ACM SIGGRAPH Computer Graphics , Proceedings of the 15th annual conference on Computer graphics and interactive techniques**, Volume 22 Issue 4

Full text available:  [pdf\(826.23 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This paper describes a high performance display system that has been incorporated into the overall architecture of the Stellar Graphics Supercomputer Model GS1000. The display system is tightly coupled to the CPU, memory system and vector processing unit of this supercomputer, and is capable of rendering 150,000 shaded triangles/sec, and 600,000 short vectors/sec. The goal of the architecture is to share hardware resources between the CPU and display system and achieve a high bandwidth connectio ...

13 Libraries and applications: Performance modeling and optimization of parallel out-of-core tensor contractions

Xiaoyang Gao, Swarup Kumar Sahoo, Chi-Chung Lam, J. Ramanujam, Qingda Lu, Gerald Baumgartner, P. Sadayappan

June 2005 **Proceedings of the tenth ACM SIGPLAN symposium on Principles and practice of parallel programming**

Full text available:  [pdf\(136.72 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The Tensor Contraction Engine (TCE) is a domain-specific compiler for implementing complex tensor contraction expressions arising in quantum chemistry applications modeling electronic structure. This paper develops a performance model for tensor contractions, considering both disk I/O as well as inter-processor communication costs, to facilitate performance-model driven loop optimization for this domain. Experimental results are provided that demonstrate the accuracy and effectiveness of the mod ...

Keywords: compiler optimization, out-of-core algorithms, parallel algorithms, performance modeling

14 Interactive modeling enhanced with constraints and physics with applications in molecular modeling

Mark C. Surles

June 1992 **Proceedings of the 1992 symposium on Interactive 3D graphics**

Full text available:  [pdf\(1.14 MB\)](#)

Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

15 Parallel execution of prolog programs: a survey

Gopal Gupta, Enrico Pontelli, Khayri A.M. Ali, Mats Carlsson, Manuel V. Hermenegildo

July 2001 **ACM Transactions on Programming Languages and Systems (TOPLAS)**, Volume 23 Issue 4

Full text available:  [pdf\(1.95 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Since the early days of logic programming, researchers in the field realized the potential for exploitation of parallelism present in the execution of logic programs. Their high-level

nature, the presence of nondeterminism, and their referential transparency, among other characteristics, make logic programs interesting candidates for obtaining speedups through parallel execution. At the same time, the fact that the typical applications of logic programming frequently involve irregular computatio ...

Keywords: Automatic parallelization, constraint programming, logic programming, parallelism, prolog

16 Graphics rendering architecture for a high performance desktop workstation

Chandlee B. Harrell, Farhad Fouladi

September 1993 **Proceedings of the 20th annual conference on Computer graphics and interactive techniques**

Full text available:  pdf(346.15 KB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

17 Modeling dependencies in protein-DNA binding sites

Yoseph Barash, Gal Elidan, Nir Friedman, Tommy Kaplan

April 2003 **Proceedings of the seventh annual international conference on Research in computational molecular biology RECOMB '03**

Full text available:  pdf(411.94 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The availability of whole genome sequences and high-throughput genomic assays opens the door for *in silico* analysis of transcription regulation. This includes methods for discovering and characterizing the binding sites of DNA-binding proteins, such as transcription factors. A common representation of transcription factor binding sites is a *position specific score matrix* (PSSM). This representation makes the strong assumption that binding site positions are independent of each other ...

Keywords: DNA sequence motifs, bayesian networks, factors binding sites, transcription

18 Performance Prediction Using Simulation of Large-Scale Interconnection Networks in POSE

Terry L. Wilmarth, Gengbin Zheng, Eric J. Bohm, Yogesh Mehta, Nilesh Choudhury, Praveen Jagadishprasad, Laxmikant V. Kale

June 2005 **Proceedings of the 19th Workshop on Principles of Advanced and Distributed Simulation PADS '05**

Full text available:  pdf(146.35 KB) Additional Information: [full citation](#), [abstract](#)

Parallel discrete event simulation (PDES) of models with fine-grained computation remains a challenging problem. We explore the usage of POSE, our Parallel Object-oriented Simulation Environment, for application performance prediction on large parallel machines such as BlueGene. This study involves the simulation of communication at the packet level through a detailed network model. This presents an extremely fine-grained simulation: events correspond to the transmission and receipt of packets. ...

19 Project GROPE Haptic displays for scientific visualization

Frederick P. Brooks, Ming Ouh-Young, James J. Batter, P. Jerome Kilpatrick

September 1990 **ACM SIGGRAPH Computer Graphics, Proceedings of the 17th annual conference on Computer graphics and interactive techniques**, Volume 24 Issue 4

Full text available:  pdf(3.06 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

We began in 1967 a project to develop a haptic+display for 6-D force fields of interacting protein molecules. We approached it in four stages: a 2-D system, a 3-D system tested with a simple task, a 6-D system tested with a simple task, and a full 6-D molecular docking system, our initial goal. This paper summarizes the entire project---the four systems, the evaluation experiments, the results, and our observations. The molecular docking system results are new. Our principal conclusions are:& ...

20 Finding motifs using random projections

Jeremy Buhler, Martin Tompa

April 2001 **Proceedings of the fifth annual international conference on Computational biology**

Full text available:  [pdf \(147.11 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Pevzner and Sze [23] considered a precise version of the motif discovery problem and simultaneously issued an algorithmic challenge: find a motif M of length 15, where each planted instance differs from M in 4 positions. Whereas previous algorithms all failed to solve this (15,4)-motif problem. Pevzner and Sze introduced algorithms that succeeded. However, their algorithms failed to solve the considerably more difficult (14,4)-, (16,5)-, and (18,6)-motif problems.

We int ...
